TRUTH: Vaccines are not being given to children and adolescents because they have not yet been tested with that age, not because they have been found to be dangerous to children and adolescents.

FACT: It typically takes a few weeks for the body to build immunity (protection against the virus that causes COVID-19) after vaccination. That means it's possible a person could be infected with the virus that causes COVID-19 just before or just after vaccination and still get sick. Continue to wash your hands, wear a mask and practice physical distancing.
